

CLIENT HEALTH PLAYBOOK

See Risk Before It's Too Late.

How the best client service teams build real-time, proactive client-health visibility that prevents revenue loss.

And a step-by-step way to do it yourself, with or without Kaizan.

Built from research across 15+ agencies and consultancies, plus how Tradedoubler, NP Digital, Gravity Global and Transmission solved this in practice.

TRANSMISSION

The Most Common Reason Client Teams Get Blindsided

Across dozens of conversations with client service leaders, one problem comes up more than any other.

Teams find out a client is unhappy only after it's too late to do much about it.

The root cause isn't a lack of care. It's a measurement problem.

Most teams still track relationship health with a monthly, subjective, manually-updated status report.

By the time it reflects reality, the moment to intervene has usually passed.

WHAT'S IN THIS PLAYBOOK

- 01 The problem & our clients' experience
- 02 Why the old process structurally can't catch it in time
- 03 What the best client teams do differently
- 04 Why CARE is the best-in-class way to manage client relationships
- 05 Case study - Tradedoubler: standardizing visibility across 3,500+ clients
- 06 Case study - NP Digital: unifying fragmented client communication
- 07 Case study - Gravity Global: catching relationship drift early
- 08 Case study - Transmission: replacing subjectivity with a source of truth
- 09 The do-it-yourself playbook
- 10 A one-day checklist to start acting on today
- 11 The next-day checklist

The Problem & Our Clients' Experience

This isn't a hypothetical.

It's the single most-repeated struggle raised in discovery conversations with agency and consultancy leaders.

"Clients are not always very honest. They often don't tell you they're unhappy until they're... way too late."

AGENCY PROSPECT

"We're always kind of lagging behind when it comes to issues" - missing chances to fix problems before they build into something bigger.

FRESH EGG

*Space & Time linked this exact gap directly to **past client losses** - accounts that churned because early warning signs weren't caught in time.*

SPACE & TIME

■ WHY THE CURRENT PROCESS STRUCTURALLY CAN'T CATCH IT

Monthly, Not Continuous

A once-a-month Excel RAG rating is a snapshot, not a signal.

By the time it's updated, sentiment has already shifted.

Subjective, Not Evidenced

Status is usually one manager's gut feel from memory.

It isn't backed by what was actually said on calls or in email threads.

Manual, Not Scalable

Staying informed relies on 1:1s, Slack-scanning and Google Alerts.

That's workable for 5 accounts. It's impossible across a full portfolio.

"It's impossible to sort of scale in an effective way." - Fresh Egg, on relying on 1:1s and Slack channels to track client status

What The Best Client Teams Do Differently

These patterns come directly from client service leaders who solved this problem in practice, not theory.

None of them started with a perfect system.

They started by changing one habit.

1 Centralize Every Channel Into One View

When client conversations spread across Teams, Slack, email and meetings, no single person has the full picture. The fix is a single system that pulls every channel into one place, so relationship health isn't reconstructed from memory.

PRACTICED BY NP DIGITAL

2 Standardize The Process Across Every Team

Your strongest account managers already notice drift and follow up fast. The goal is a shared process that works the same way for a junior AM as it does for your most senior one.

PRACTICED BY TRADEDOUBLER, ACROSS 3,500+ CLIENTS

3 Reinvest Time Saved On Admin Into Watching

Cutting manual admin only helps if the freed-up time is deliberately redirected. Point it at noticing early signals: reduced engagement, vaguer feedback, a shift from partnership to transactional.

PRACTICED BY GRAVITY GLOBAL

4 Watch For Underlying Sentiment, Not Status

A client can report a project as "on track" while genuinely losing confidence in the relationship. The teams who catch risk early look systematically at sentiment underneath the update.

PRACTICED BY PASHN

5 Make "Great" A Shared Definition, Not Tribal Knowledge

In most teams, the definition of a healthy account lives in a few experienced people's heads. Write it down as a shared framework, and the whole team - and any AI helping them - can act on it consistently.

COMMON PATTERN ACROSS ALL FOUR ORGANIZATIONS

Why CARE Is The Best-In-Class Way To Manage Relationships

CARE is Kaizan's framework for client relationship health.

It's a structured, multidimensional view of where every account stands, built from analysis across 1M+ calls, 10M+ emails and thousands of chat messages.

It scores four pillars independently, because strength in one doesn't compensate for weakness in another.

C

Client Satisfaction

How the client actually feels - and how often we bother to measure it.

A

Activity With Stakeholders

Whether the right people are engaged, often enough.

R

Relationship Quality

Whether interactions are deepening, or quietly becoming transactional.

E

Expansion

Whether conditions are right to grow, and whether the team is acting on them.

THE PROOF: 16 VERIFIED METRICS, TOP COHORT VS BOTTOM COHORT

C

Client Satisfaction

CSAT measurements per year **41** vs 14

Goals-conversation share **11.2%** vs 7.8%

Market-intelligence share **0.35%** vs 0.02%

A

Activity with Stakeholders

Calls per month per account **5.8** vs 2.3

Client stakeholders engaged **242** vs 142

DM talk-time share **16.3%** vs 11.5%

R

Relationship & Interaction Quality

Client talk-time share **65%** vs 61%

Risks surfaced per year **15.3** vs 6.9

High/Low moments per call **4.05** vs 3.29

E

Expansion

Commercial moments per year **265** vs 105

High-value moment share **54%** vs 43%

Commercial/financial conv. share **12.9%** vs 8.3%

The insight that changes how you read CSAT: where it's actually measured, top and bottom accounts score **identically** (7.1 vs 7.1). The real gap is **measurement frequency** - top accounts are measured 41 times a year, bottom accounts just 14. CARE closes that gap by measuring continuously, across all four pillars, instead of waiting for a quarterly survey.

Why Not Just Track CSAT?

Because CSAT alone can't tell you why a score is what it is.

CARE keeps satisfaction, activity, quality and expansion separate so you know exactly where to act.

Why Four Pillars, Not One Score?

A single blended score hides which lever actually moved.

Four independent pillars mean strength in one can never mask weakness in another.

Why Continuous, Not Periodic?

Top accounts are measured nearly 3x more often than bottom accounts.

CARE scores every call and email automatically, so frequency stops being a resourcing problem.

05 CASE STUDY

Tradedoubler

Derek Grant, VP of Operations & General Manager - global affiliate marketing platform, 3,500+ clients

STANDARDIZATION AT SCALE

WHO THEY ARE

Tradedoubler pioneered affiliate marketing when it launched in 1999, becoming one of the first networks of its kind.

It's been publicly traded since 2005 and now operates in more than 90 markets, serving over 3,000 brands.

One of its co-founders, Martin Lorentzon, went on to co-found Spotify.

REVENUE OPPORTUNITY AT THIS PORTFOLIO SIZE

£ **£1.35m**

average annual revenue retained through earlier risk intervention

£ **£1.80m**

average annual upsell value surfaced from existing clients

£ **£0.69m**

average annual efficiency value reclaimed (+13.4 FTE capacity)

£ **£3.83m**

average total gross annual benefit modeled for this account

THE CHALLENGE

- Thousands of clients spread across territories, languages and stakeholder groups.
- Getting a proper overview of the client base was, in Derek's words, very difficult.
- Teams spent significant time writing summaries, tracking follow-ups and reporting on activity.

WHAT THEY DID

- Tradedoubler set an explicit target: 20% less time spent on administration, business-wide.
- They used Kaizan to standardize how every team captures and tracks client activity.
- The result: one consistent process and a single bird's-eye view across the whole portfolio.

RESULTS

20%

operational efficiency target across the business

3,500+

clients visible in one consistent view

"Kaizan has significantly helped us achieve that target."

DEREK GRANT, VP OF OPERATIONS, TRADEDROUBLER

06 CASE STUDY

NP Digital

Brandon Smith, Managing Director - global performance marketing agency

UNIFIED CLIENT INTELLIGENCE

WHO THEY ARE

NP Digital was built on Neil Patel's marketing blog, one of the most-visited in the world, before growing into a 750+ person global agency.

Forbes has called Patel a "Top 10 Marketer," and the Wall Street Journal named him one of the world's most influential marketers.

The agency now serves more than 950 clients across 20+ countries.

THE CHALLENGE

- As NP Digital scaled globally, client conversations spread across Teams, Google Workspace, Outlook and Slack.
- Each team member had their own partial view of a relationship based only on what they personally saw.
- There was no single source of truth for how a client was really doing.

WHAT THEY DID

- Rather than asking teams to manually reconcile every channel, NP Digital used Kaizan to analyze engagement across every platform in one place.
- Every account manager now sees the same complete picture, regardless of who was on which thread.

RESULTS

8 hrs/mo

manual admin saved per account manager

Full

visibility across every communication channel

Earlier

identification of risk and expansion opportunities

"We see AI as critical to the future of our business, not just across client servicing, but across every facet of the business."

BRANDON SMITH, MANAGING DIRECTOR, NP DIGITAL

07 CASE STUDY

Gravity Global

Ada Cavallmoretti, Group Account Director - world's most awarded B2B agency

CATCHING DRIFT EARLY

WHO THEY ARE

Gravity Global is the world's most awarded B2B marketing agency, picking up more than 500 industry awards in 2025 alone.

Its proprietary F.A.B. framework - Fame, Admiration, Belief - has driven award-winning campaigns for Airbus, Embraer and Unilever.

The agency operates from 16 offices worldwide.

REVENUE OPPORTUNITY AT THIS PORTFOLIO SIZE

£ **£1.70m**

average annual revenue retained through earlier risk intervention

£ **£2.27m**

average annual upsell value surfaced from existing clients

£ **£0.75m**

average annual efficiency value reclaimed (+14.4 FTE capacity)

£ **£4.71m**

average total gross annual benefit modeled for this account

THE CHALLENGE

- Client relationships rarely break in one moment. They erode quietly.
- A client becomes a little less engaged, feedback gets vaguer.
- A partnership can slide from strategic to transactional before anyone names what's happening.

WHAT THEY DID

- Gravity Global used AI to take on the manual, lower-value work that was consuming account managers' time.
- That freed time was deliberately reinvested in watching for early, easy-to-miss signals of drift.
- The team now acts before a relationship has gone cold, not after.

"It's really dangerous, because it can be very slow in developing. It just sits underneath."

ADA CAVALMORETTI, GROUP ACCOUNT DIRECTOR, GRAVITY GLOBAL

08 CASE STUDY

Transmission

Alex Beddoe, Head of Biddable Media - world's largest independent B2B marketing agency

REPLACING SUBJECTIVITY

WHO THEY ARE

Transmission has grown from a 2013 startup into the world's largest independent B2B marketing agency.

It runs its own AI-and-data operating system, Propulsion OS, to power campaigns for clients including Microsoft, HP and Oracle.

Alex Beddoe leads its biddable media practice.

REVENUE OPPORTUNITY AT THIS PORTFOLIO SIZE

£ **£0.93m**

average annual revenue retained through earlier risk intervention

£ **£1.24m**

average annual upsell value surfaced from existing clients

£ **£0.42m**

average annual efficiency value reclaimed (+8.2 FTE capacity)

£ **£2.59m**

average total gross annual benefit modeled for this account

THE CHALLENGE

- Leadership needed to know what was really happening across the book of business.
- Without it, visibility depended on what teams, or clients themselves, chose to report.
- That's a filtered version of reality, not a source of truth.

WHAT THEY DID

- Transmission made AI infrastructure, not a novelty layered on top of existing process.
- Kaizan now gives leadership direct visibility into day-to-day account activity.
- Decisions are based on what's actually happening, not a secondhand summary of it.

"Now I have a much greater visibility into what's going on day-to-day, without the subjectivity of what my teams or even our clients are telling me."

ALEX BEDDOE, HEAD OF BIDDABLE MEDIA, TRANSMISSION

The Do-It-Yourself Playbook

You don't need any tool to start improving client-health visibility.

You need a process.

Below is what that process looks like manually, step by step - and what changes when Kaizan runs it for you automatically.

	MANUAL STEP	WHAT GOOD LOOKS LIKE	HOW KAIZAN AUTOMATES IT
	1. Define your own health dimensions	Write a short rubric: client satisfaction, stakeholder activity, relationship strength, expansion potential. Assign a revenue potential loss/gain estimate to each dimension so the team can see what's actually at stake. Share it with the whole team.	The CARE framework scores every account on these four dimensions automatically, from every call and email. No rubric to maintain by hand.
	2. Audit where client signals actually live	List every channel a client relationship touches: email, calls, Slack, CRM notes. Flag who on the team sees each one.	Kaizan's AI assistant joins calls and reads connected email, CRM and Slack automatically. No channel depends on one person remembering to check it.
	3. Move from monthly to weekly review	Put a standing weekly slot on the calendar. Review any account whose status has changed - don't wait for a report that's already stale.	CARE Score updates continuously and flags a shift the same week it happens. There's no report to wait for.
	4. Build a same-week escalation habit	Give every flagged dip a named owner. Document the next action within the week - not 'we'll keep an eye on it.'	AI Helpers draft the re-intro or follow-up automatically. The action is ready the moment risk is flagged.
	5. Make every flag evidence-based	Keep a running log linking each risk or opportunity flag to the actual quote or moment that triggered it.	Every CARE score traces back to the source conversation and quote automatically. Evidence is built in, not reconstructed after the fact.

A One-Day Checklist To Start Acting On Today

Whether you start manually or with Kaizan from day one, this is the fastest path to a real signal instead of a monthly guess.

- ☐ **Write down your four health dimensions using the best-in-class CARE system** 10 MIN

Satisfaction, activity, relationship strength, expansion. One page, shared with the whole team.

- ☐ **List every channel a client relationship touches** 20 MIN

Email, calls, Slack, CRM. Flag which ones currently depend on one person remembering to check.

- ☐ **Put a weekly, not monthly, review on the calendar** 5 MIN

Even 20 minutes a week beats a monthly RAG update that's already out of date.

- ☐ **Pick 3-5 accounts to pilot evidence-based flagging on** 15 MIN

Don't try to fix the whole portfolio at once. Prove the habit on a handful of accounts first.

- ☐ **Decide who owns escalation when a flag comes in** 10 MIN

A flag with no owner is just information. Name who acts on it within the week.

YOUR FIRST DAY, MAPPED OUT (9:00-10:00 AM)

Don't Boil The Ocean

Start with 3-5 accounts, not the whole book.
Prove the habit before you scale it.

Name An Owner

A flag nobody owns just becomes noise.
Assign it the same week it's raised.

Automate Once Proven

Once the habit sticks manually, hand it to Kaizan.
The process stays the same; the effort drops to zero.

"The recipe for a top-cohort client is becoming clear. A systematic cadence is key: prioritize interactions, with the right person, on the market and opportunities, often, so you can't be ignored."

KAIZAN, THE CLIENT SERVICE BENCHMARK 2026

The Next-Day Checklist

Once the day-one habits are running, layer in these six.

Each is drawn from Kaizan's Client Service Benchmark 2026 - a year of anonymized data comparing client portfolios that grew against ones that quietly slipped away.

None require new tooling. They're habits any team can start on their next call.

☐ **Add two questions to every weekly 1:1** 5 MIN

Ask which client objective was named this week, and what the team brought in from outside the client's world. Top accounts name a goal 11.2% of the time; bottom accounts only 7.8%.

☐ **Set a decision-maker touch target** 10 MIN

Aim for 2+ decision-maker calls per month on every top account. Both cohorts reach about half their defined DMs - only frequency tells top from bottom.

☐ **Run a weekly risk-phrase scan** 15 MIN

Pull recurring risk phrases from last week's calls and emails into a Monday digest. Around 38% of struggling accounts are already telling you what's wrong.

☐ **Sort your at-risk view by silence, not noise** 10 MIN

A quiet risk register on an active account is the warning sign, not a green light. Flag accounts with zero logged risk activity for review first.

☐ **Set a new-stakeholder-per-month target** 10 MIN

Have each account manager introduce one new client-side contact per top account, per month. Top accounts engage 1.7x more stakeholders than bottom ones.

☐ **Pair every key account with an internal sponsor** 15 MIN

A senior sponsor owns one quarterly conversation with the client lead - brought in by default, not only when an account is already escalating.

The through-line across the benchmark: top and bottom accounts look remarkably similar in **what** they do. They differ in **how much, how often, and with whom** - which is exactly what these six moves, and the CARE framework, are built to close.

What Our Customers See When Using Kaizan

45%

average share of at-risk revenue protected via early CARE signals

4.8%

average addressable upsell pool from existing clients

5.4 hrs/wk

average saved admin hours reclaimed per person

21%+

average revenue growth per client
